

Energy Asset Management

Innovative Solutions for Energy Asset Management

Effective energy asset management is essential for business success in today's dynamic energy environment. Constellation's team of experts can assist with all aspects of your energy strategy, providing reliable and innovative solutions to optimize your infrastructure so you can focus on your core operations.

We support a range of services, including:

- Combined heat and power
- Central heating and cooling
- District energy and microgrid systems
- Backup and transitional generation
- Behind-the-meter solar, storage and fuel cells
- Compressed air systems

Comprehensive Energy Solutions

With a suite of integrated solutions, we can customize a strategy tailored to your specific needs:

Design, Development and Construction: We work with your organization to develop and implement turnkey, site-specific energy assets for optimal performance and budget certainty.

Financing: We provide flexible funding structures, including no upfront capital requirements, allowing organizations to alleviate financial burdens through long-term contracts with an investment-grade Fortune 200 company.

Operations and Maintenance (O&M) Services: Our experienced team provides direct management and control of complex assets through our comprehensive O&M program.

Energy Management and Sustainability Solutions: We deliver access to best-in-class technology platforms and expertise in energy management, including electricity and natural gas procurement, and our Constellation Navigator division supports both corporate sustainability and emissions reduction goals.

For more than 20 years, customers have relied on Constellation as a trusted provider for their behind-the-meter utility infrastructure. Our customized strategies and services help organizations in various industries optimize their energy assets, reach their carbon-neutral goals and maximize cost savings.
